Saw a demo of Cucumber in BDD action presented by a colleague, which we plan to use it for our functional test, replacing Selenium.

Programming in script language Ruby. This powerful monster can do so many things, and low level ground, plumbing work. Remind me old time when Perl, the only language that looks the same before and after RSA encryption, dominates across from system administration to web application.

Those are the years when IT in disarray - *Kingdoms rose and fell; borders, even languages changed; men were killed by their own side and women raped by soldiers from up to seven different nations every week.*

Ruby is Perl on LSD.

Terrence Miao - Cucumber is a functional test automation tool for lean and agile teams. It supports behaviour-driven development, specification by example and agile acceptance testing. You can use it to automate functional validation in a form that is easily readable and understandable to business users, developers and testers. This helps teams create executable specifications, that are also a goal for development, acceptance criteria and functional regression checks for future changes. In this way, Cucumber allows teams to create living documentation, a single authoritative source of information on system functionality that is always up-to-date.   Feb 15, 2011

First experience with Kinect. Quite impressed with its motion recognise technology. Wonder whether it can be supported by others, PC, tablet ...

Dean Budd - How many hours (or minutes) would it take for the novelty to wear off... ;)   Jan 23, 2011

Terrence Miao - Deano, I'm talking about innovation.

Think about if Kinect could read not only your body movement, but also your eyeballs. that maybe you can use it to replace mouse on computer; if Kenect could read your fingers movement, that make touch screen useless, so it can solve hygiene headache for the sake of world health; think about if you could become instant magician, your wink, eyebrow raise could let you win more chips on poker table ...

The potentials are just endless.   Jan 23, 2011

Dean Budd - Ahhh gotcha... there are heaps of other technologies that solve those problems much better than Kinect i.e face tracking, etc and are much more mature than Kinect.

Kinect is really just a dumb piece of software that analyses your silhouette...   Jan 23, 2011

Dean Budd - Also, Kinect (like everything M$) is hardly innovation... they get already existing technologies, dumb them right down and then slap a "jumping" game on top of it all... ;) The Wii was far more innovative.   Jan 23, 2011

Terrence Miao - Most time market dominates innovation. Though M$ is hardly create something new, but you can improve it. Check http://kinecthacks.net/   Jan 24, 2011

Dean Budd - Cool!   Jan 24, 2011

GENEVA — Good news for Swiss bankers: They may soon be allowed to wear red underwear, black nail polish — and even eat garlic.

Swiss banking giant UBS AG said Monday it is revising its 44-page dress code telling its Swiss staff how to present themselves, which generated worldwide ridicule for its micromanagement of their dressing and dining habits.

The code instructs employees on everything from their breath — no garlic or onions, please — to their underwear, which should be skin-colored.

"We're reviewing what is important to us," UBS spokesman Andreas Kern told The Associated Press.

He said the bank would issue a pared-down booklet with more general guidelines on how to impress customers with a polished presence and sense of Swiss precision and decorum.

The existing code tells female employees how to apply makeup, what kind of perfume to wear and what color stockings are acceptable. It advises them not to show roots if they color their hair and to avoid black nail polish.

"You can extend the life of your knee socks and stockings by keeping your toenails trimmed and filed," Zurich-based UBS told its female staff. "Always have a spare pair: stockings can be provisionally repaired with transparent nail polish and a bit of luck."

Men are told how to knot a tie, to make sure they get a haircut every month and to avoid unruly beards and earrings.

"Glasses should always be kept clean," the code instructs. "On the one hand this gives you optimal vision, and on the other hand dirty glasses create an appearance of negligence."

The guidelines also recommended that employees always wear wristwatches to signal "trustworthiness and a serious concern for punctuality."

The UBS style guide prompted derision and disbelief when it first surfaced last month, but Kern insisted it was still good for the bank's reputation in the long run.

"Everyone knows the staff in our banks strive for the perfect look," he said.

So will employees now be able to wear red underwear? Who checked to see if they did before? Kern declined to give specific examples of planned changes.

A spokesman for rival bank Credit Suisse said he understands what UBS was trying to achieve.

"Every Swiss bank with private or retail customers has some sort of guidelines," Marc Dosch said. "UBS has taken it to absurd lengths, but in general it's a good thing that people have some guidance."

He noted that banks aren't alone in telling their employees what to wear: "There are gas stations, burger bars and supermarkets where you have to wear ties, and even silly hats at Christmas," he said.

The 157-year-old UBS has a history of providing detailed advice for its employees, which numbered 65,000 worldwide at the end of 2009. A handbook for bank trainees gives a country-by-country behavior guide.

In Russia, it tells employees to be prepared to hold your drink at business engagements and to "never reject an invitation to the sauna."

In Latin America, "turning up before an appointment might even be considered rude."

And in the United States, it says, "never criticize the President."

Small increments of development, TDD and Continuous Integration seem to be the essential for a successful Agile development.

Ensuring you have more than one pair of eyes looking at the code written, either via peer review or pair programming (a light weight version) will guarantee a better quality software.

[Coding Horror: Pair Programming vs. Code Reviews](#)

Dean Budd - There's only one statement I completely disagree with... *the navigator is reading, checking,* **spell-checking**

Having a spell-checking Navigator sucks, to the point where we had PP training sessions to help people unlearn their natural instincts! In a TDD environment the Navigator should be focusing on what tests to write next (in effect, gaps in functionality) and not obsessing about what's going on on the screen.   Jan 18, 2011

Dean Budd - PP is a great learning tool, more than anything else. In 5 years of PP I learnt more about architecture, code and the tools I was using than in the 10 years prior.   Jan 18, 2011

Dean Budd - *I'm a little wary of spending a full eight hours working this way. I suspect this might be fatiguing in larger doses*

Oh so true!   Jan 18, 2011

Terrence Miao - That's why it's **light weight version** Pair Programming. Not that 8 hours per day, 5 days per week heavy, overdosed, steroid taking like Pair Programing.

Pragmatic NOT Dogmatic is the essential of Agile Development I reckon.   Jan 18, 2011

Dean Budd - Exactly, but how to manage this is the tricky part. If you had ad-hoc Pairing your Velocity would fluctuate quite wildly I would imagine... among other issues.

When I was Team Lead it was easy to manage Pair Programming cause we could also "manage" the personalities in the team as well (I would know who paired best with who, which pairs have been pairing for too long, which two people should *never* pair together, etc, etc)

All of this was decided at Stand Up...

Pair Programming is a very social activity as well that you have to manage carefully... you don't want pairs ending up in a fist fight (which I've seen!) *HAHA*

Challenging...   Jan 19, 2011

Dean Budd - Maybe I'm analysing all of this too much... *<haha>*   Jan 19, 2011

Going back to Linux desktop after 4 years absence. Can't stand security agent, monitor, virus scanner which slow my box down, and the harassment kept mounted by network admin ...

Terrence Miao - ...
+ install Ubuntu 10.4 (TLS) 64 bit
+ install VirtualBox
+ VirtualBox can't raw disk access existing Windows 7 on the first partition because Windows 7 / Vista remove hardware profile feature in system. Damn it!
+ boot and install Windows 7 Ultimate 64 bit from USB key into VirtualBox
+ install VirtualBox Guest Addition and make Windows 7 run ever faster than on naked hardware
+ check Windows 7 Update (41 updates, 130MB, before RC1)
+ half of Windows 7 Update failed due to the disk space I allocated to VirtualBox too small, that is 10GB!
+ download and run GParted. GParted can't increase size of a size-fixed Virtual Disk
+ create new Virtual Disk
+ dd copy content across from old disk to new disk:

20983808+0 records in
20983808+0 records out
10743709696 bytes (11GB) copied, 386.306 s, 27.8 MB/s

+ mount new Virtual Disk, and reboot:

FATAL: INIT18: BOOT FAILURE.

back to step 1 !!!!!!!!!!!!!!!!!!

+ bootable Windows 7 on USB drive doesn't work - Boot issue, can't remove it after installation. Replaced by Windows 7 DVD image file

+ Working!   Nov 12, 2010

Terrence Miao - Buzz - Public   Nov 8, 2010

Windows Phone 7's new user interface **is stripped down to the basics and mixes simplicity with clean typography and is something completely different** ...

This is the nicest words I've even heard to a Microsoft product.

Actually, I quite agree with it. WP7 has impressed me much not by its intuitive UI, but also the simpler to navigate, quicker to launch and run applications, and there is more, it seamlessly integrated with Office in the cloud hub.

So don't write off M$ too soon into history book. It still have the biggest enterprise customers, and its profit and margin is higher than Apple though Apple has the bigger market value.

☐ ☐ ☐ ☐ ☐

Terrence Miao - As new Microsoft slogan says **"Be What's Next"**   Nov 8, 2010

Mike Nguyen - Got 'copy & paste'?   Nov 8, 2010

Terrence Miao - Copy and paste feature will be added in WP7 early next year.   Nov 8, 2010

Dean Budd - I don't get it! Those pages are way too big for the phone!   Nov 8, 2010

Terrence Miao - As an information hub, or harbour, you can park any pages under WP7 stewardship. Trust me. Trust Microsoft ...   Nov 9, 2010

Dean Budd - Will do! <*ahhhhhhhh....*>   Nov 9, 2010

Angelos Megremis - I'm having a good look at WP7.   Nov 9, 2010

Find out how CXF performance compares with the latest versions of Axis2 and Metro

[Java web services:](#)
[CXF performance comparison](#)

Dean Budd - *CXF* has been the better Web Service library even since its days as *XFire* (It can still be frustrating in areas though)   Nov 4, 2010

Terrence Miao - Buzz - Public   Nov 4, 2010
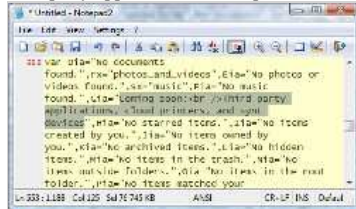

Axis2 together with the XMLBeans framework is well suited for Web Services which are using very complex schema definitions. The disadvantages of Axis2 are its complexity as well as the insufficient JAX-WS support. Therefore anyone who wants to work with JAX-WS should choose Apache CXF or the reference implementation.

Those who prefer a seamless integration with the Spring framework are well advised with Apache CXF. Furthermore CXF is slim and easy to use. CXF is the tool of choice if a SOAP engine has to be embedded into an existing software.

[ABSOLUTE-ANDROID: Android Ginger Bread Features](#)

Terrence Miao - Buzz - Public   Nov 2, 2010

After playing around different mobile devices, including iPhone 4, 3GS, iPod Touch, iPad, HTC Desire with Android 2.1, HTC HD3 which is running Windows Phone 7, finally I get my fingers on Samsung Galaxy S with Android 2.2.

The conclusion is this is device and mobile OS I don't want to put my fingers away!

It's so light when I hold Samsung Galaxy S in my hand, comparing a fully armoured, heavy weight iPhone 4. Also, applications on Android 2.2 feel much faster than same apps on 2.1. Touch screen is more smoothie. I visit a Chinese News Portal website which has a huge front page, plus tons of flash everywhere, on Galaxy S it is just like you access from your PC, snappy and quick.

But the most important thing is the mobile OS, I don't feel I want something only available on iOS and App Store, but not on Android and Android Market. Here is my favorite Android app list:

. FM Radio (listen too your local FM radio broadcast)
. AccuWeather widget (weather forecast)
. Layar (Augmented Reality browser)
. Skype on Android! Same as you run Skype on your PC without Video chat
. TuneIn Radio (listen to internet radio stations world wide, including BBC, ABC...)
. and Google applications. Voice Input and Search is the best I reckon.

Attached a few screenshots taken on th phone.

https://u3ntpa.bay.livefilestore.com/y1pYAstB3glStO-4hpW08j9ar1H6Ya-

%2002.png

Complete Favourite Android App List from Master Chef:

FM Radio, AccuWeather, Layar, Facebook, Skype, TuneIn Radio, Adobe Reader, Photoshop Express, Twitter, Advanced Task Killer, Astrid Tasks, ASTRO File Manager, Angry Birds, Dropbox, ColorNote, ColorDict, Color Flashlight, screenshot.

Google farm (Any services on the web, you should get them on Android): Gmail, Buzz, Search, Maps, Latitude, Places, Earth, YouTube, Talk, Voice, Voice Dialler, Voice Search, Listen, Translate, Authenticator, Moderator, Goggles, Finance...

So there comes a touchy decision - whether to go with Samsung Galaxy Tablet or wait for Google Nexus Two made by Samsung as well ...

Bruce Cooper - Did you have any problems with lag? I have a love hate relationship with my galaxy S. When it works properly it is easily the best phone in the world right now, but I find the occasional lag and battery problems ruin the experience. I wont go back to iphone in a hurry, but i still find myself compelled to complain   Nov 2, 2010

Terrence Miao - Yep, notice this lag issue if I run multiple tasks, e.g. talking over Skype at the same time try to run some other apps, or switching applications. Battery on Galaxy S dies quickly. But it doesn't bother me much. It's a replaceable battery, so not very hard to find a substitution with large capacity. I know people did same trick on mobile phone. The battery can last for a few months in a standing by mode without a full charge.

Interestingly enough, I wonder how Gingerbread can match on Galaxy Tab. Android 2.2 is not for tablet devices.   Nov 2, 2010

Bruce Cooper - Yeah, the samsung nexus will be very tempting. I guess we will find out on the 8th how good it will be   Nov 2, 2010

Terrence Miao - Yep, looking forward to next Monday.

BTW, reading some lag issues today reported on Samsung phones - http://www.groovypost.com/howto/mobile/most-common-lag-fixes-for-samsung-galaxy-s-captivate-vibrant-fascinate-epic-4g/

Quadrant Standard on Galaxy S I test is only 1031. Check:
https://u3ntpa.bay.livefilestore.com/y1pewr_YMlO8XGhL_oNYuXRaUQ-
YqvWt2j43jBtyuGegtIgI9NZZWcNISTN1j9TS2n5F6I5wlgdHXrtpvouURmgkK5BbbFBYA6u/Samsung%20Galaxy%20S%20Quadrant%20Standard%20Benchmark.png

Question now is it still a lag issue or just need to overclock it?   Nov 3, 2010

Terrence Miao - There is killer application from Google missing for Android at the moment - Google Docs!

Office Hub is already on Windows Phone 7. But who will pay the loyalty if you have to use a downsized and less features product. Google Docs is compatible most Office format documents, and it's free. I guess maybe Google is still waiting for Tablet and Android Gingerbread ready ...   Nov 4, 2010

Mike Nguyen - Froyo is pretty awesome! Telstra has finally released it for the Desire. Apps seem to be a bit quicker & transitions seems to be smoother. Big plus is the App2SD feature (for the Desire's 580M memory anyway) + codecs to playback AVIs (+Divx)   Nov 4, 2010

Samsung Galaxy Tab - HQ Android Tablet Unboxing
  [Samsung Galaxy Tab - HQ Android Tablet Unboxing](#) [Samsung Galaxy Tab - HQ Android Tablet Unboxing](#)

Terrence Miao - iPhone screen to small. Fonts on it can be too tiny to read. iPad is too big to hold in one hand and carry it around easily. 7" Galaxy Tablet fills the gap between iPhone and iPad rightly and nicely. Plus it runs Android, etc, etc ...
Oct 18, 2010

Dean Budd - That's all very fine. But it's not big enough for people to *see* me carrying it around. I need people to recognise my status with a single glance... Oct 19, 2010

Kieran Simpson - I also contend that < 10" is too small read to anything meaningful on without having to be so far zoomed out that the letters are microscopic. Oct 19, 2010

Terrence Miao - I played an iPhone 3GS with iOS 4.0.1 intensively last week. My favourite websites I accessed mostly don't support mobile devices. The pain in the back to pan web page on iPhone tiny screen to locate information I need, the pinch and counter-pinch action (zoom in / out) in order to tune the fonts to right size that I can read but not overwrite the who screen just awkward, unnatural.

The implementation to make iPhone screen size like devices visit web application is total failure, even by Steve Jobs' tasting standard.

I report this issue to Apple long time ago. But they don't listen because my Anti-Apple policy against extravagance and resource waste. I said:

"You are a fornicating baboon. Fornicating ... Yes, I just really can't do it in this box!" Oct 19, 2010

Mike Nguyen - I don't think phones were designed to be used to surf the web. Maybe a quick browse or checkup on the latest scores. But definitely not for pr0n!

The Galaxy tablet is certainly a welcoming (serious) challenge to the iPad. No doubt other big manufacturers are waiting in anticipation. But I doubt it will leap frog the iPad. Just the very reason why you're reluctant to get one yourself ;) Oct 19, 2010

Terrence Miao - Buzz - Public   Oct 16, 2010

Thinking a dream role before the retirement of your IT career? You can be a Sharepoint Developer in the big bank!

Dean Budd - That's my dream... I'm just building up enough skills so I can get there one day! *<haha>* Oct 13, 2010

Terrence Miao - Buzz -   Oct 13, 2010
A working mate (tester) sits beside me is testing HTC HD3 which runs Windows Phone 7 on it.

He reckons the touch screen and feel on this mobile with Windows Phone 7 is better than iPhone 4. That's very impressed! I play a little bit, the screen of HTC is superior, still far to get the point of Windows Phone 7. But it is definitely not a Windows XP variant.

Microsoft still has its money, resources and mojo. If it takes you seriously, Microsoft recently agree its mobile strategy missed a generation. But I believe history will repeat itself: Apple creates, Microsoft pinches and beats Apple in the end.

Terrence Miao - Buzz -   Oct 13, 2010

In 1981, about 85 percent of Chinese were living on less that $1 a day; by 2005, only 15.9 percent of the population was living in extreme poverty. During that time 600 million people – or 10 percent of the population of the planet – escaped poverty in China.

One astonishing fact – the market reforms initiated by Beijing in 1979 have pulled more people out of poverty "than all the aid programs we have seen throughout the world," as Stanford economist Paul Romer recently put it.

You can dislike China, disagree with Chinese Communist Party, but it's undeniable the fact and achievement Chinese made last 30 years.

Dell joins tablet war. Goodness me it's running Android!

[Dell unveils new, 17.8cm tablet to challenge iPad | The Australian](#)

Mike Nguyen - Like Samsung, they will need to undercut iPad big time to have any hope of success. I don't think Steve Jobs will lose any sleep or kidneys over this one.   Sep 22, 2010

Terrence Miao - Buzz - Public   Sep 22, 2010
The mp3 player for an obstinate person

I bought this mp3 player a few weeks ago. It doesn't have contemporary sexy design as iPod. And with no accelerometer or pedometer.

Actually, it's ugly and bulky, but you can hold it firmly in your hand. It comes only with 1GB flash memory, built-in USB interface so you can plug it into any computer with USB port, no USB cable you need to carry around. The tiny screen only can tell you the song you are playing. Want a touch screen? Kindly sod off.

One feature I really like is that you need provide one "AAA" battery. Then it can give you 36 hours unstoppable audio after a full charge. Now you can understand why this feature is so handy:

1. you won't lost any songs when the battery is dead, just put a new battery in
2. you don't need to pay big loyalty to Apple just to ask them to open the case and replace the dead battery for you, if unfortunately you are an iPod sucker

In addition to that, this mp3 player can let you listen FM radio, make voice record, which are not the fancy features made my purchase decision.

I can put one weekly The Economist, or an audio book in it, playing charmingly more than 10 hours audio for me, good enough.

And it only costs $19.95. I don't worry about lose it. And I don't have safety concern if someone wants to rob it.

I give people who design this mp3 player a big thumb up. They accurately understand most people only know and need a small feature set of a product. They design it for a niche market. In this market, they find picky, stingy and never-satisfied people just like me with no effort.

☐

Tony Szabo - so you carry your mp3 player, digital camera, mobile phone, and portable gps unit all separate and in one pocket? no thanks! ;)   Sep 22, 2010

Terrence Miao - In fact, I only carry my mp3 player and Nokia mobile with me.

The mobile can take terrible photo for tasteless people. If I need GPS service, I have a small bluetooth GPS receiver. TomTom is running happily on my crappy Nokia mobile. If I don't need them all, I have two bare hands and can give ladies good massage.

Will any ladies get impressed when one of your hands always occupied and masturbate an iPhone?   Sep 22, 2010

Tony Szabo - i didn't say anything about an iphone :)

(and hey, everyone loves a good maths debate)   Sep 22, 2010

Terrence Miao - <haha>Very droll Tony!</haha>   Sep 22, 2010

Tony Szabo - all i'm sayin is why carry a device for every need, when most of your needs can be satisfied by one device that fits easily in one pocket (iphone/android/...)

if u want better photos, bring a better camera :)   Sep 22, 2010

Dean Budd - At times like these I ask... *"What would Bear Grylls carry around?"*   Sep 22, 2010

Dean Budd - Having an iPhone and being so frustrated at it's hopeless music playing abilities... I bought a Creative Zen http://en.wikipedia.org/wiki/File:Zen_mp3_player.JPG   Sep 22, 2010

Kieran Simpson - I have my iPod and my Android phone. I'm a big believer in dedicated devices for tasks; they often do the job better than "all in one" combos.   Sep 22, 2010

Dean Budd - Except for those "all-in-one" burgers I get down the corner shop! *Hmmmmm.....*   Sep 22, 2010

Mike Nguyen - The Galaxy comes close as he all-in-one device. Until that is HTC unveiled the new Desire HD.   Sep 22, 2010

Tony Szabo - When i press play, I hear music. That's all I need from an mp3 player :)

Everyone has different needs tho (and why there's so many mp3 players out there)   Sep 23, 2010

Mike Nguyen - Is that an mp3 player/nokia brick phone/camera in your pocket or are you just happy to see me?   Sep 23, 2010

After looking at several service oriented architecture (SOA) solutions, the company opted to deploy Oracle SOA Suite 11g to provide real-time integration and visibility. It was an early adopter of the technology in Australia and was up and running with it within two weeks in September last year.

G. James has seen cost savings of $430,000 in development and integration time to the business in the first 12 months of using the Oracle SOA Suite 11g and other off-the-shelf Oracle solutions.

Finding a way for new systems to intereact with legacy system | The Australian

Terrence Miao - **You must have lived in Oracle's fantasy and believed in all its brouhaha!**   Sep 21, 2010

Dean Budd - **LOL!** That's hilarious! 2 weeks? It takes longer than that to install it! *<haha>*   Sep 21, 2010

Kieran Simpson - Just remember that 11G is >80% not Oracle developed tech. What G. James didn't realise of course is that if they went with something else, they' would have gotten up and going even faster :)   Sep 21, 2010

Dean Budd - Yeah, 2 weeks was for *Hello, World!* *<haha>*   Sep 21, 2010

Tony Szabo - The only thing quicker than a 2 week *Hello, World!* is the first system crash!   Sep 22, 2010

HOLLYWOOD director James Cameron is preparing to dive to the deepest point of the oceans, it was revealed Sunday, as part of his research for a sequel to "Avatar," his 3D epic.

He has commissioned Australian engineers to build a deep sea submersible which can reach the bottom of the Mariana Trench - 36,000ft (10.9km) down in the western Pacific - after deciding to set the film in the turbulent waters of Pandora, an alien moon.

Governments are increasingly reasserting their sovereignty. Countries erecting borders in cyberspace.

Big IT companies are building their own digital territories, where they set the rules and control or limit connections to other parts of the internet.

Network owners would like to treat different types of traffic differently, in effect creating faster and slower lanes on the internet.

We're heading into a war for control of the web.
